INFRAFRONTIER - European Research Infrastructure for Modelling Human Diseases

In the INFRAFRONTIER consortium, more than 20 leading biomedical research institutes in 15 countries join forces to investigate the link between gene function and human diseases by the use of model organisms. They contribute to human health by advancing disease prevention and therapies through appropriate models. INFRAFRONTIER is also a part of the European Joint Programme on Rare Diseases (EJP RD)
INFRAFRONTIER is The European Research Infrastructure for Modelling Human Diseases
We contribute to human health by **advancing disease prevention and therapies through appropriate models**
